Summary: This simple database illustrates what can be built with only a few days of work using raw data from a customer. It also illustrates the formats and some of the conventions used in typical databases developed by PC Possibilities, Inc.

Database Name: Baptism Records

Office Size: 12 administration staff in a church of approximately 3000 families

Business Objective: Enable quick and accurate ad hoc inquiries of Baptism data for subsequent records and mailings to parents for follow on programs.

History: This database was started by the office manager creating one table and a simple form for data entry. A staff person entered the data. This was expanded into the simple database shown here.

IT Environment: A peer-to-peer network in 3 buildings connected by fiber optic. Internet access is provided on the network via a DSL line. There are 12 IBM compatible PCs on the network. There is also an Apple network of approximately 20 Macs also running off the DSL modem.

Development Time: Total PC Possibilities time was 18.5 hours, including data cleanup for consistency based on Validation Codes tables.

Startup: Found Tables to be ReAttached.	
ОК	

These two figures show the one-time "ReAttach" that occurs whenever the two MDB files have been moved to another folder. The User does not see this because the System Administrator is the only one top move the MDB files.
